## Introduction

The U.S Department of Housing and Urban Development (HUD) funds local homeless assistance and prevention networks called Continuums of Care (CoC). In addition to organizing, delivering and reporting on housing and services for people who are experiencing homelessness, CoCs are required to complete a one-night point in time count of homeless persons during the last ten days in January. Idaho is divided into two CoCs: Boise City Ada County (Region Seven) and Balance of State (regions One through Six).

Idaho's 12<sup>th</sup> annual Point-In-Time (PIT) count was conducted for the night of January 27, 2016, by Idaho's two CoCs and Idaho Housing and Finance Association (IHFA). The data from this count helps determine the amount of funding awarded for homeless programs across the state, reports changes among the homeless population and raises public awareness of homelessness. Data from the one-night PIT count and the longitudinal data collected by the Homeless Management Information System (HMIS) are the primary sources used to measure the progress in meeting the national strategic goal of preventing and ending homelessness.

## Opening Doors, Federal Strategic Plan to Prevent and End Homelessness

In 2010, the United States Interagency Council on Homelessness released *Opening Doors: Federal Strategic Plan to Prevent and End Homelessness*. The Plan is the nation's first comprehensive strategy to prevent and end homelessness. It outlines an interagency collaboration that aligns mainstream housing, health, education and human services to prevent Americans from experiencing homelessness in the future. Opening Doors is focused on four key goals: 1) End chronic homelessness by 2016; (2) Prevent and end Veterans homelessness by 2016; (3) Prevent and end homelessness for families, youth, and children by 2020; (4) Set a path to end all types of homelessness. Data from the PIT Count can be used as one measure to see if the CoCs are on track to meet these goals.

## Understanding the Point-In-Time Count

### Goal

The primary goal of the PIT Count is to provide a one-night "snapshot" of the number of homeless persons who are either living on the streets, in places not meant for habitation, or are currently residing in emergency shelters or homeless transitional housing projects. Additionally, the PIT Count collects demographic and subpopulation information to better understand the situations and extent of homelessness in our state.

### PIT Definition of Homelessness

Using HUD's definition of homelessness for the PIT count, CoCs are instructed to count all adults, children in households, and unaccompanied youth who, on the night of the count, reside in one of the places described below:

- An unsheltered homeless person resides in a place not meant for human habitation, a vehicle or on the streets. Included in this count are people in temporary tents, encampments, and warming centers.
- A sheltered homeless person resides in an emergency shelter, transitional housing or supportive housing for homeless persons who originally came from the streets or emergency shelters.

### PIT Data Collection Methods

The state is divided into seven regions within the two CoCs: Regions One through Six are in the Balance of State CoC and Region Seven is in the Boise City/Ada County CoC (see map page 13). The PIT count consists of two methods to collect data. The sheltered data is collected in aggregate, from surveys completed by homeless service providers and from the HMIS database. The unsheltered data is collected from surveys administered directly to

individuals. This annual enumeration reports on the exact number of persons counted and is not based on prior reports or estimates of how many homeless persons there may be based on opinion.

The Sheltered Count for all regions is coordinated through IHFA. Sheltered surveys are sent to over 50 agencies operating more than 100 different projects that provide shelter and housing to men, women and children on the night of the count. All surveys, both sheltered and unsheltered, are sent to IHFA for data validation and compilation to produce the final statewide report. The Unsheltered Count uses an interview component for all persons contacted in order to get an unduplicated count and collect basic demographics. All unsheltered surveys are sent to IHFA for review and surveys that meet the criteria for homeless are entered into HMIS for deduplication and reporting.

The PIT Count Committee with representation from Regions One through Six and the Boise City/Ada County CoC for Region Seven is responsible for working with their CoC, regional housing coalitions, local PIT committees, regional homeless service providers and other organizations to conduct the count.

Activities that IHFA, CoCs, regional PIT Committees, or housing coalitions perform include:

- Leading the sub-committee or the group planning the count in their region
- Recruiting and training volunteers and agency staff to conduct the count
- Contacting other community and faith-based organizations, community leaders, business and media outlets that may help with the count or provide volunteers
- Identifying “known locations” and service-based programs that non-sheltered homeless persons frequent or stay
- Planning events centered around bringing the unsheltered homeless to a central location

The seven regions consist of the following counties:

Region One	Benewah, Bonner, Boundary, Kootenai, Shoshone
Region Two	Clearwater, Idaho, Latah, Lewis, Nez Perce
Region Three	Adams, Boise, Canyon, Elmore, Gem, Owyhee, Payette, Valley, Washington
Region Four	Blaine, Camas, Cassia, Gooding, Jerome, Lincoln, Minidoka, Twin Falls
Region Five	Bannock, Bear Lake, Bingham, Caribou, Franklin, Oneida, Power
Region Six	Bonneville, Butte, Clark, Custer, Fremont, Jefferson, Lemhi, Madison, Teton
Region Seven	Ada

### Reviewing the Data

The sheltered and unsheltered survey forms collect a variety of data variables that can change year to year to reflect the type of data required by HUD or requested by the CoCs. Some questions are asked only of individuals and the head of households, while others are collected on all persons.

### PIT Uses and Limitations

Due to the nature of a one-night count the uses of the PIT Count data and its limitations should be noted. It is understood that a one-night point in time count has limitations and in any given year may under-count or over-count the homeless population when compared to data collected over a longer period of time or at other periodic intervals. The CoCs understand these limitations but still find value in the data, as what is deemed most important is the quality and accuracy of the count as opposed to merely the size of the count.

The PIT Count is one tool that can be used for effective planning and provision of homeless assistance services. Communities need to understand the size and characteristics of their entire homeless population, not just those who already access shelter and services. The PIT Count is the only time that an unduplicated count of both the unsheltered and sheltered homeless is conducted at the same time.

The PIT Count covers the whole state and an increase or decrease does not necessarily reflect the situations in all areas of the state. To determine which regions are specifically reporting increases or decreases please refer to the tables at the end of this report. The data contained in this report should not be used for annual extrapolation or for an exact count, but rather as a gauge of the number of persons experiencing homeless in Idaho on a given night.

### Increases and Decreases in the Count

Decreases or increases in the number of persons counted from year to year may indicate either a change in the homeless population or external circumstances or both. Conditions that affect the count include: number of organizations participating in the count, homeless persons not accessing shelter or services during the count, volunteers experiencing difficulty finding those who are living on the street who agree to be surveyed, weather or natural disasters, community events, and new or closed projects.

The 2016 PIT Count as a whole increased 14% from 2015, primarily due to a 57% increase in the number of unsheltered persons counted. Most housing programs operate at or near capacity therefore the sheltered count tends to stay fairly stable but may fail to reflect the true nature of homelessness across the state. Even as programs move more people into stable housing there are still a large number of newly homeless people needing assistance.

The count increased in some regions while it decreased in others. In most cases the increases were attributed to improved counting methods, better training and a broader base of agencies participating in the count.

- Region One reported a 5% increase overall. They had a 35% increase in the unsheltered count, largely in Households with Children, and a 19% decrease in the number of sheltered counted. One project ceased operations and the increase in the number of Households With Children may be due to a longer wait than usual for Transitional Housing.
- Region Two had a 1% decrease overall mostly due to a 14% decrease in sheltered count. This region had a project cease operations but with the strong job market has experienced a lower demand for housing assistance. The increased unsheltered count was due to improved training and agency participation rather than an increase in the actual number of persons experiencing homelessness.
- Region Three had the largest overall increase of 41%. As with the other regions there was a sheltered count decrease along with a substantial increase of 122% of the unsheltered persons counted. This increase comes from a new aggressive PIT Count strategy that was put into place last year with several components. In general the region utilizes a large variety of organizations and trained volunteers to seek out the unsheltered homeless in their large, mostly rural area. These include the use of 2-1-1, Head Start, agency wait lists, trained and experienced volunteers, and building relationships through-out the year so that community members are familiar and knowledgeable about the count and more willing to participate.
- Both Regions Four and Six use community events to bring attention to their counts. Region 4 had an overall 6% increase and Region 6 had a 13% decrease.
- Region Five had increases in both the sheltered and unsheltered counted for an overall increase of 57%. This increase was attributed to having more experienced staff coordinating the count and expanding outreach to the community. Several new key players were involved in the count including the school districts, CAP agency, and the Fort Hall Indian Reservation.
- Region Seven had an increase of 15% and noted that the low vacancy rates and lack of affordable housing options are leading to increases in both the sheltered and unsheltered counts.

Decreases in the sheltered population may also be due to the direct placement of homeless persons in Rapid Re-housing programs and increased Veteran Affairs Supportive Housing (VASH) and Supportive Services for Veteran Families (SSVF) vouchers. Persons residing in these program types are not included in the PIT Count.

### Precariously Housed

HUD's definition of homelessness for the PIT count does not include persons who may be staying with friends or relatives, in a hotel/motel, in a treatment facility or in jail. Persons in these circumstances are defined as precariously housed and are often characterized as being at imminent risk of becoming homeless.

## Participating Shelter/Housing Programs

Agency	Region
Advocates Against Family Violence	3
Aid for Friends	5
Alternatives to Violence of the Palouse	2
Bannock Youth Foundation	5
Bingham Crisis Center	5

## Acknowledgements

It is due to outstanding participation of the homeless services providers across the state, the tremendous effort of the PIT Committee, the regional housing coalitions, and the time and dedication of agency staff and numerous volunteers, that we are able to produce this report.

A special acknowledgement is given to the respondents whose data is contained in this report and were willing to share their personal information, experiences and life situations in order to better understand homelessness in our communities.

Financial assistance to coordinate the count and produce this report was provided in part by the Home Partnership Foundation.

The annual Point-In-Time Count Report is produced by Idaho Housing and Finance Association

Point-In-Time Count Reports can be accessed online at <http://www.idahohousing.com/ihfa/grant-programs/homeless-management-information-system-hmis.aspx>

## PIT Count Results

On the night of January 27, 2016, the PIT Count identified 2,247 homeless men, women and children in Idaho. This represents a 14% overall increase from 2015. This is the largest PIT Count in the last 5 years. While the increase is substantial, most reports from the regional coalitions attribute the increase to more involvement in the count process from all types of community organizations and better volunteer training, rather than a steep increase of the number of unsheltered persons in the state. Please see the section entitled *Increases and Decreases in the Count* for additional information.

### 2016 Total PIT Count

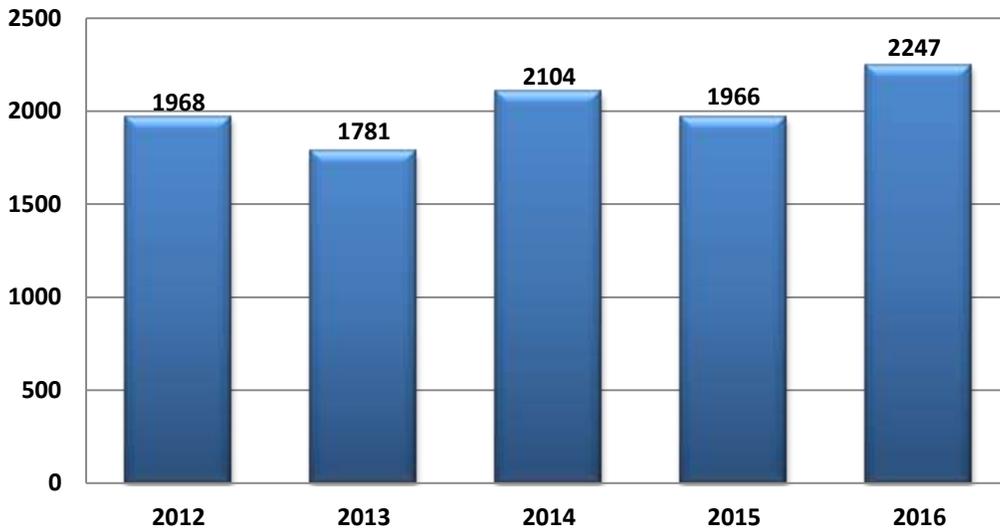

Figure 1

In 2016, the unsheltered homeless accounted for 32% of all homeless persons, which is an increase from 2015 when only 24% of the total homeless were unsheltered. On the whole the unsheltered population across the state increased by 57% while the sheltered count only increased by .8%. Since the shelters are generally full, and no new projects were added this year, it is not unusual for the sheltered count to remain stagnant.

### Total PIT Count - Sheltered and Unsheltered

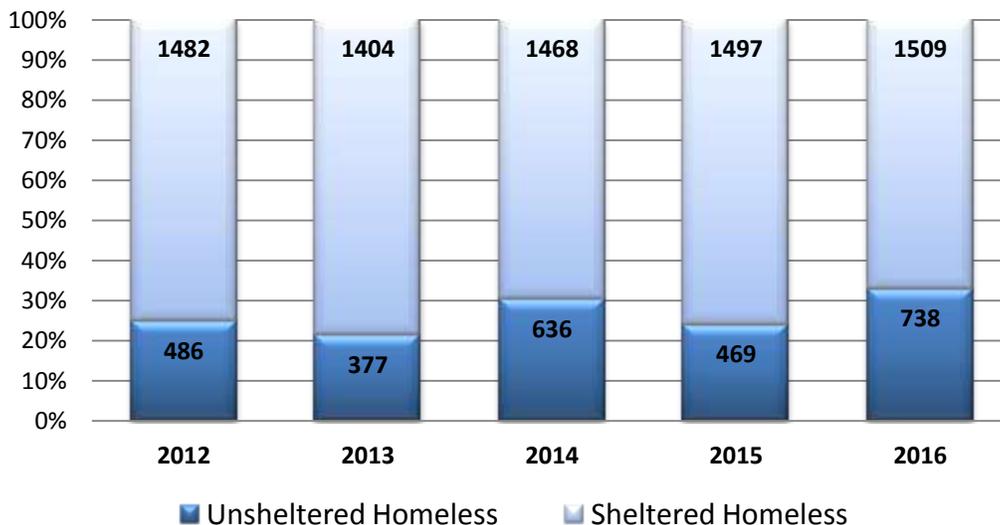

Figure 2

# Households

## All Adult Households and Households with Children

The PIT Count Report breaks out households into two categories: All Adult Households and Households with Children. All Adult Households consist of single individuals or households of adult members only. This includes married couples and unaccompanied youth households where all members are age 18 years or older. Households with Children are all households that have at least one minor child. This includes households of only children such as unaccompanied youth under 18 and adolescent parents with their children

All Adult Households continue to represent the majority (56%) of the homeless population in Idaho. The one-night PIT Count increased from 2015 for both Households of All Adults and Households with Children by 9% and 23% respectively.

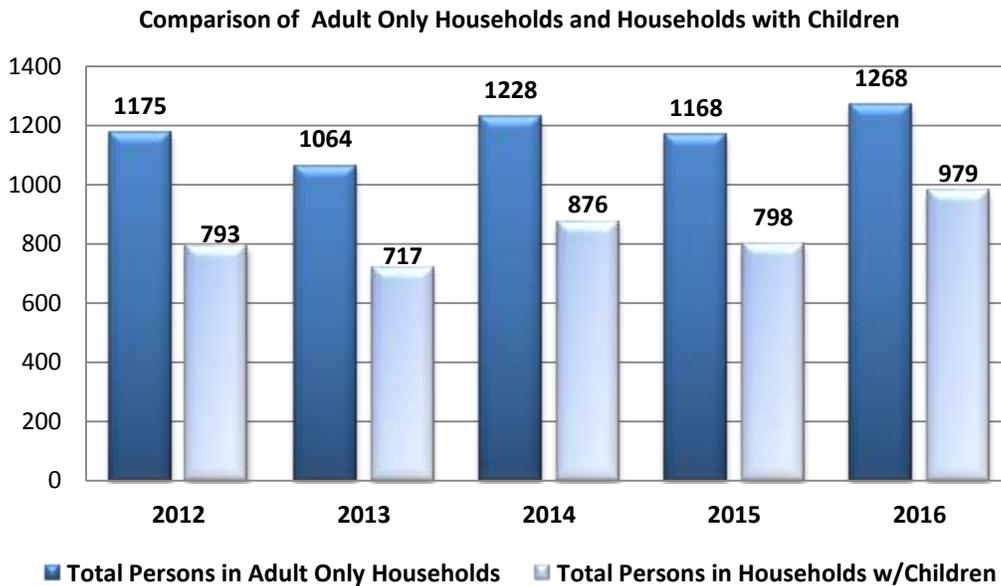

Figure 3

## Youth Households – Subset of All Adult Households and Households with Children

Youth are persons under the age of 25 and a Youth Household is defined as an Unaccompanied Individual under the age of 25 or Parenting Youth Household where everyone in the household is under the age of 25. Youth Households (165) account for 11% of all households (1522) in the PIT Count. The majority of Youth Households are comprised of Unaccompanied Youth.

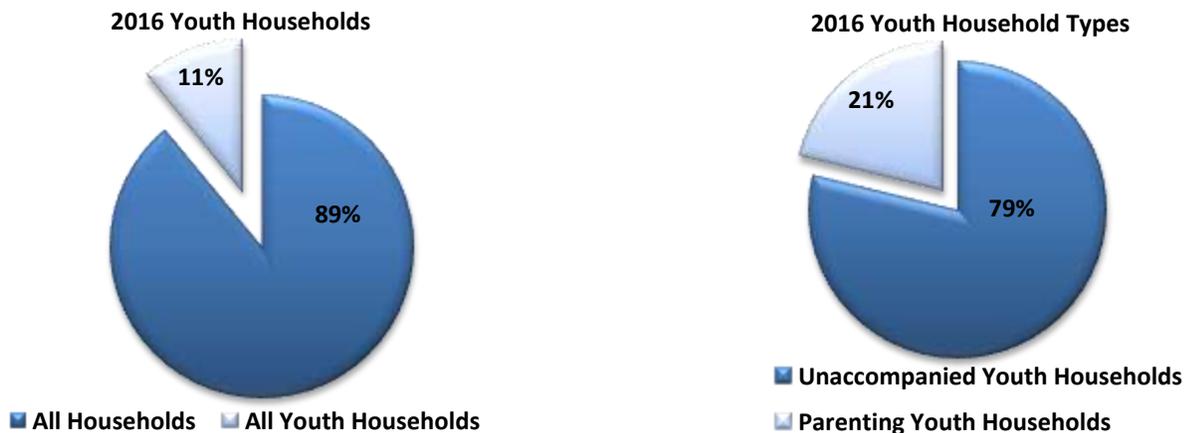

Figure 4

## Households with Children

*Opening Doors: Federal Strategic Plan to Prevent and End Homelessness* has set a goal of ending homelessness for families, youth, and children by 2020. While the PIT Count is primarily a count of persons, a count of the actual household units is also conducted as fluctuating household sizes can affect the total count from year to year.

In 2016, there were 307 Households with Children with a total of 979 persons. Compared to last year, this is a 20% increase in the number of households and a 23% increase in the number of persons in Households with Children. While the total number of Sheltered Households with Children changed very little from 2015 to 2016, the number of unsheltered households with children increased substantially from 2015 to 2016.

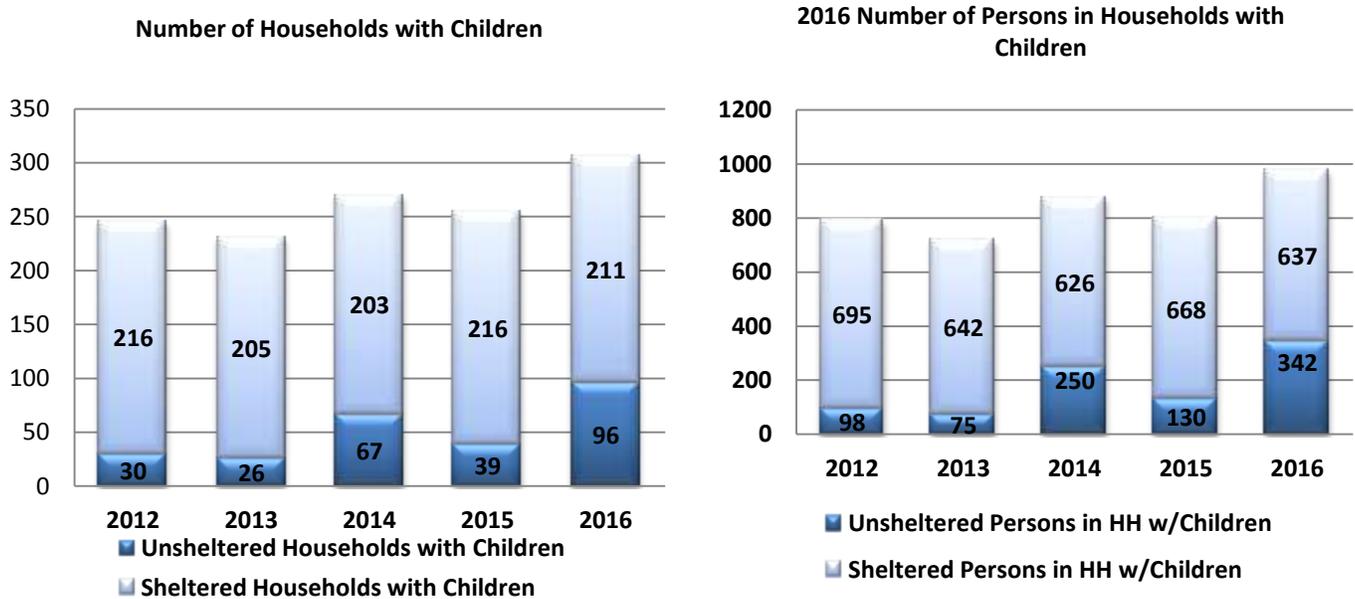

Figure 5

In 2015 Unsheltered Households with Children accounted for 15% of all Households with Children but in 2016 they accounted for 31%. Further research is needed to tell if this increase is due to insufficient housing for homeless families with children, an explosive growth in homeless unsheltered households with children or an anomaly within this population on the night of the count.

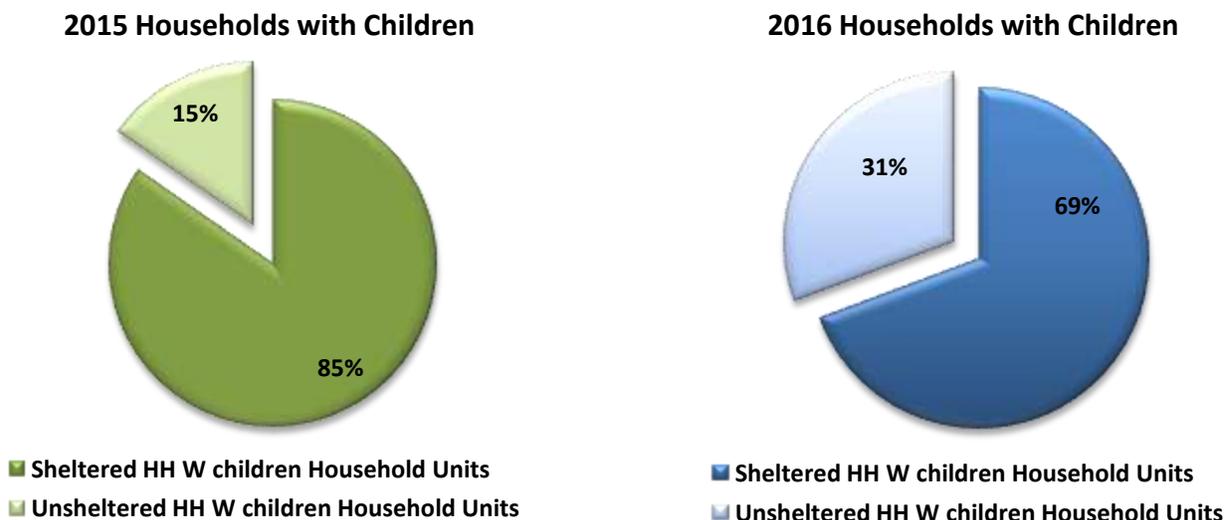

Figure 6

## Chronically Homeless

Ending chronic homelessness is another goal outlined in the federal strategic plan to end homelessness. The Chronically Homeless are defined as an unaccompanied homeless individual with a disabling condition, or a family with a Head of Household who has a disabling condition, and who has either been continuously homeless for a year or more OR has had at least four episodes of homelessness in the past three years totaling 12 months or longer. Additionally, to be counted as chronically homeless each episode must have been sleeping in a place not meant for human habitation (e.g. living on the streets) and/or in emergency shelter.

In 2016 there were 339 persons who identified as chronically homeless as compared to 249 in 2015 (Figure 7). This is a 36% increase from last year and a 39% increase from 2014. Of the 339 counted 240 were chronic individuals and 99 were in chronically homeless families (Figure 8). Within the total homeless count in the PIT Count, 15% were identified as Chronically Homeless in 2016 which is a small increase from the 13% in 2015.

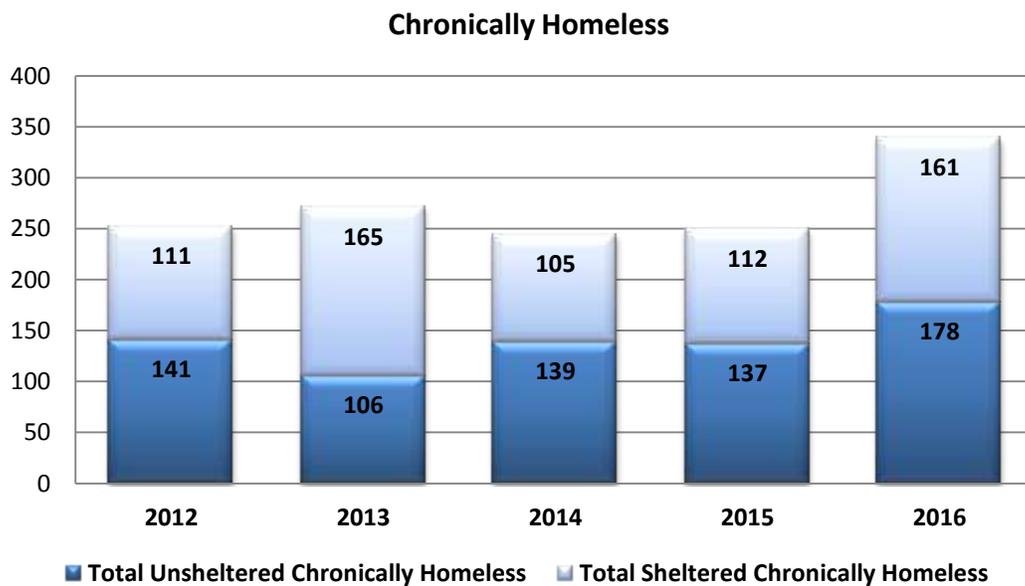

Figure 7

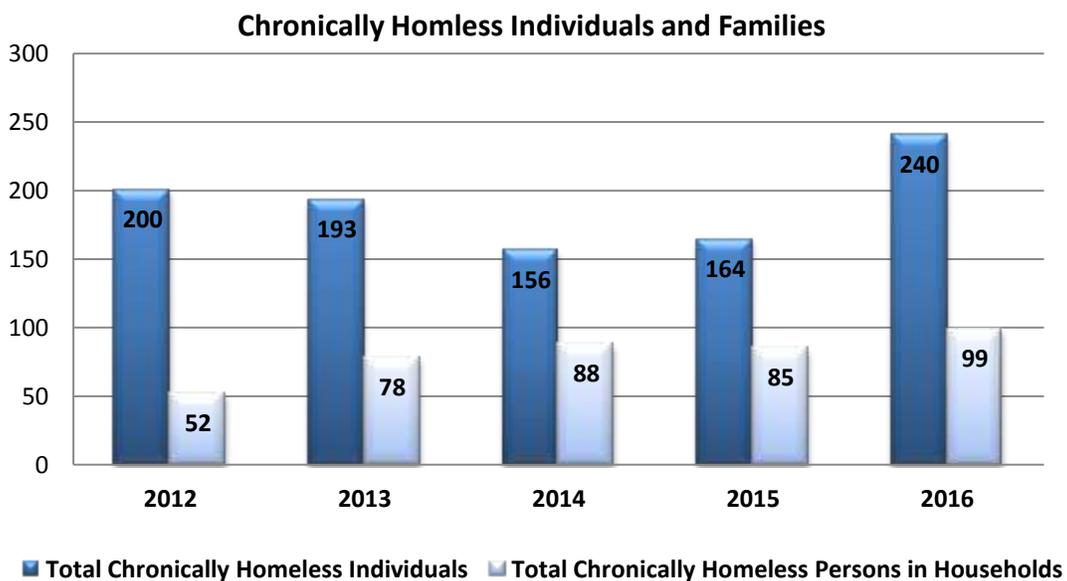

Figure 8

## Veterans

The number of homeless veterans within the general homeless population (adults only) increased from 249 in 2015 to 267 which is an increase of 7%. Ending veteran homelessness is another *Opening Doors* goal and while the overall count did increase, the number of unsheltered veterans decreased by 13%.

Resources targeted for homeless veterans such the Veteran Affairs Supportive Housing (VASH) and Supportive Services for Veteran Families (SSVF) are available across the state and each region has its own outreach and housing strategies for the veterans in their area. Veterans and families who are in VASH and SSVF projects are not included in the PIT Count
