

TOILET PAPER ROLL BIRD FEEDER

Hanging a bird feeder in your yard not only provides food for birds in your area, but it is also a great way to observe and learn about bird behavior right from your yard.

SUPPLIES

Toilet Paper Roll, birdseed, string, scissors, 2 small but sturdy sticks, shortening or peanut butter, popsicle stick or some other type of spreading tool

PROCEDURE

- 1) Poke two holes, big enough for string to pass through, across from each other at the top of the toilet paper roll.
- 2) Poke another four holes, big enough to fit your two sticks through, at the bottom.
- 3) Cover the outside of the toilet paper roll in shortening or peanut butter.
- 4) Roll toilet paper roll through birdseed.

- 5) Poke sticks through premade holes at the bottom.
- 6) Thread the string through the top two holes.
- 7) Hang your finished birdfeeder on a tree and patiently wait for the birds to come.

SCIENCE

Each species of bird has a different type of diet. The diet of each bird is based upon not only what it likes or dislikes but also the adaptations they've developed to find and eat their food. Some birds eat seeds or nuts, others eat fish or meat, and some berries or fruits. Observe the birds that stop by your yard and learn what types of food they like to eat.
